

VERTICAL STAMP MIX

HOW TO USE:

An initial aggressive scratch coat of Bond Coat should be applied and allowed to dry before applying Vertical Stamp Mix. Temperature should be 40 degrees or above for a period of 48 hours.

To Mix the 40lbs Bag: Place 7 quarts of clean, cool water in a separate bucket. Add a EZ-Color Pak, if desired, and mix for five minutes. Add half of the bucket of Vertical Stamp Mix to the bucket of water and mix until product is evenly dispersed. Add the rest of the product and mix for three to five minutes. Let the product set up for five minutes and re-mix thoroughly. You may need to add small amounts of water to make the mix workable.

(Caution: Too much water can reduce the strength of concrete and in some cases cause cracking.)

The scratch coat should be wetted with Acrylo Bond immediately before applying Vertical Stamp Mix. Apply Vertical Stamp Mix to the scratch coat using a trowel. When a finger is able to press lightly into the product without removing material, a texture can be embossed into the surface. Use Bubblegum Liquid Release on all stamps before you start the stamping processes.

PRECAUTIONARY STATEMENT:

Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Avoid breathing dust/fume/gas/mist/vapours/spray. Wash hands thoroughly after handling. Do not eat, drink or smoke when using this product. Wear protective gloves/protective clothing/eye protection/face protection.
